- You are asked to implement a django 'To-Do List' project where you need to create a model i.e 'TaskModel' having fields 'taskTitle', 'taskDescription', 'is_completed'. Here 'is_completed' field should be of type models.BooleanField and default values for this field should be 'False'—(20 Marks)
- In this project, users should be able to:
- add tasks with the help of forms. This Form should have only 2 fields for getting data of Model fields 'taskTitle' and 'taskDescription'. 'Submit' button of the form should redirect the user to 'show tasks' page (20 Marks)
- show their entered tasks in a page, i.e 'show tasks' page (20 Marks)
- delete any specific task by clicking 'Delete' button beside the task (10 Marks)
- edit infos of specific tasks by clicking 'Edit' button beside the task (You can route to a page for editing tasks i.e 'edit task' page) (10 Marks)
- get specific tasks as completed by clicking the 'Complete' button beside the task. 'Complete' button of the 'show tasks' page should redirect the user to 'completed tasks' page (10 Marks)
- whenever the 'Complete' button is clicked for any task, the task should not be shown anymore in the 'show_tasks' page, rather this task should be now **shown in another page i.e 'completed tasks'** (10 Marks)
